Risk and Reward Profile

The risk and reward indicator is calculated on the basis of the unit price volatility (the ups and downs of its value) over the prior 5 years.

The risk and reward indicator is based on historical data and may not be a reliable indication for the future risk profile of the Fund. The risk and reward category shown is not guaranteed and may change over time.

The lowest category does not mean risk free.

The Fund is in category 6 because of the high range and frequency of price movements of the underlying investments the Fund invests in.

The value of your investment in the Fund may be affected by the following risks:

- The value of investments may fall as well as rise and you may not get back the money you invested.
- Assets of the Fund may be denominated in a currency other than the base currency of the Fund. Changes in the exchange rate between the base currency and the currency of such assets may lead to a fall in the value of the Fund’s assets as expressed in the base currency.
- The Fund can invest in derivatives. These instruments have additional risks such as legal risk or liquidity risk (the inability to sell the contract due to lack of buyers in the market). These risks can have adverse impacts on the overall value of the Fund.
- For a complete overview of all risks attached to this Fund investors should refer to the ‘Risk Factors’ section in the Prospectus.
